

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1-8. (Canceled)

9. (Currently Amended) An electro-optical device, comprising:

- scanning lines;
- data lines;
- pixels arranged corresponding to intersections between the scanning lines and the data lines to form a matrix;
- signal-supplying lines having first ends that are arranged close together and second ends that are arranged close together, all of the signal-supplying lines having the same width;
- a selecting circuit selectively supplying image signals to the data lines on the basis of selection signals supplied through the signal-supplying lines, and the selecting circuit including switching elements having first input-output terminals connected to the data lines, second input-output terminals connected to a node supplying the image signals, and control input terminals to which the selection signals are supplied; and
- a selection-signal supplying device to supply the selection signals to the first ends of the signal-supplying lines,
- each of the signal-supplying lines including:
 - an input terminal provided as the first end;
 - a first wiring line extending from the input terminal in a same direction as the direction that the data lines extend, and extending to the second end in a direction perpendicular to the direction that the data lines extend; and

a second wiring line extending from the first wiring line to the control input terminal in a same direction as the direction that the data lines extend,

a length being the same for each signal-supplying line from the first end thereof, through a portion of the first wiring and through the second wiring line, to the control input terminal of the corresponding switching element.

10. (Canceled)

11. (New) An electronic apparatus, comprising:
the electro-optical device according to claim 9.
